

# TAX MANAGEMENT

## Go electronic

EROAD has developed the first electronic tax solution that will revolutionize the way carriers manage tax compliance, reporting and meet record keeping requirements.

The EROAD application automatically records distance, locations and tax exempt miles, supports configuration changes, calculates taxes owed, and provides a range of services including weight-mile tax, IFTA and IRP reporting.

The government-approved technology platform means that operators can safely ensure they do not over-pay their road tax obligations.

Other benefits are a significant reduction in tax administration, full visibility around tax obligations, enhanced operational control, and less stress for drivers and managers.

### KEY FEATURES

- EROAD's in-vehicle hardware, the Ehubo, measures distance traveled with a high degree of accuracy, and captures location, route and operational data.
- The Ehubo records, stores and continuously transmits encrypted data to the web-based application called Depot, where users access information and services online.
- The tax application displays and reports distance and location traveled by vehicles, calculates taxes owed and generates supporting records.
- Weight-mile tax, IFTA and IRP reports are automatically generated in the correct format. The application also supports on-line tax filing where available.
